County Looking for Public Input on Renewable Energy

San Bernardino County is creating a plan for renewable energy and is looking for public input throughout the process. This month, the County Land Use Services Department is holding its first round of public workshops to discuss the future of renewable energy projects within the County.

The San Bernardino County Partnership for Renewable Energy and Conservation (SPARC) will provide a framework for renewable energy development while protecting communities and natural resources. Community input will help shape the drafting of a County General Plan Renewable Energy Element for consideration by the Board of Supervisors.

Supervisor Ramos encourages the public to participate. "Community participation is key to the success of developing a renewable energy component for the County that makes sense for our communities. I welcome the opportunity to discuss these issues at the public workshops as we move forward together on creating the vision for renewable energy in San Bernardino County."
